

IAN KIMANI

Junior Software Developer

Thika, Kenya | 0798 965 757 | frihkian@gmail.com
github.com/Frihk | linkedin.com/in/ian-kimani-7a6a83300 | dev.to/frihk_ian

PROFESSIONAL SUMMARY

Junior software developer trained through Zone01's tuition-free, peer-to-peer engineering program, with a primary focus on Go for building efficient, concurrent applications. Brings a BSc in Physics (Meru University of Science and Technology) and a background in computational modeling and experimental data analysis, applying that same analytical rigor to debugging, testing, and algorithm design. Also builds in Python and Zig, with a growing focus on systems-level, performance-oriented development.

TECHNICAL SKILLS

Languages: Go (primary — efficient, concurrent application development), Python (scripting & data handling), Zig (systems-level, performance-focused development), JavaScript (front-end scripting & interactivity), Bash (shell scripting & automation)

Core Competencies: Debugging & refactoring, algorithm design & data structures, code review, version-control workflows

Tools & Environment: Git/GitHub, Linux (Ubuntu), VS Code

Technical Foundations: Computational physics, mathematical modeling, structured research & data analysis

PROJECTS

- **Shopping Tracker** (*in progress*) — Tracks household stock and reminds users what's running low without manual checks. Estimates each product's lifespan from purchase history and recalibrates automatically as real repurchase timing comes in. Built with Go and vanilla js. [Frihk/Shoppinghelper](#)
- **Eira** — Web platform connecting a virtual assistant with clients, with a self-service admin panel so the owner can update site content and add client testimonials without developer involvement. Built with Go and React. [Frihk/Elsie](#)

PROFESSIONAL EXPERIENCE

Zone01 — Junior Developer

January 2026 – Present

Tuition-free, peer-to-peer software engineering program with no formal lectures.

- Solve applied coding challenges individually and in peer teams, covering algorithms, data structures, and software design
- Build and refine applications in Go, focusing on efficiency and concurrency
- Debug and refactor code through structured peer review, strengthening code-quality judgment
- Collaborate in small, self-directed teams to plan and ship working solutions under project deadlines

Mount Kenya University — Lab Technician

- Conducted physics experiments and demonstrations for students, reinforcing theoretical concepts through hands-on learning
- Recorded and managed experimental data, maintaining accuracy and completeness for analysis

EDUCATION

Meru University of Science and Technology
